RPG EXCELLENCE
MANAGEMENT SYSTEMS & BUSINESS ASSURANCE
SAFETY • ENVIRONMENT • SECURITY • RESILIENCE

COMPANY PROSPECTUS | NOVEMBER 2026

RPG Excellence Prospectus

One home for business assurance
People, processes and evidence connected

RPG Excellence is a home for business assurance. Our platform brings operational hubs, evidence and accountable actions into one workspace, supported by onsite ISO consultancy, auditing and practical learning. Start with one priority and build a connected management system.

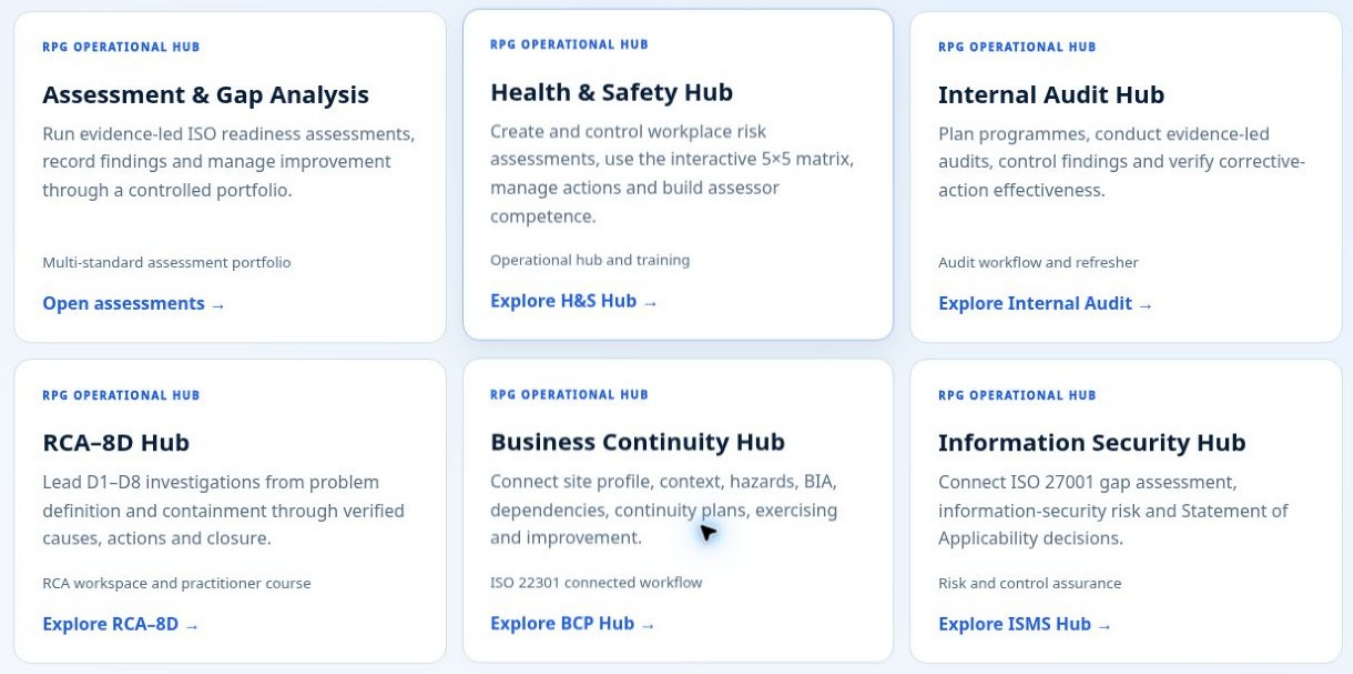

Website preview. Dashboard figures are illustrative, not customer results.

THE RPG EXCELLENCE PLATFORM

A home for your business assurance

RPG Intelligence gives your organisation a shared place to manage assurance work. Dedicated hubs keep specialist processes clear while common people, documents, evidence, findings and actions support the wider management system.

Public website view of the operational hubs. Modules and access depend on the selected package.

Work and accountability. Dashboard, My Tasks & Approvals, named owners, due dates and management visibility.

Controlled information. Document Management, evidence, reports, company and site information, people, roles and access.

Operational relationships. Connect assurance work with Supplier Assurance and Asset Management, maintenance and controlled change.

Explore the platform and resources

WHY BRING ASSURANCE TOGETHER

Keep the whole assurance story in view

The business value comes from the connections: less time assembling information, clearer responsibility and a better basis for management decisions.

01

Reduce fragmented administration

Keep the evidence behind a decision with the related work. Reduce repeated requests, disconnected spreadsheets and reliance on personal inboxes.

02

Make ownership visible

Give people a controlled view of assigned work, due dates and decisions. Help managers see where support, escalation or resources are needed.

03

Make review easier

Bring audit findings, risk decisions, maintenance evidence and outstanding actions into an organised assurance picture for leadership and customer review.

04

Carry learning into the next cycle

Use incidents, audits and effectiveness reviews to inform future controls, priorities and plans. Retain the reasoning behind changes.

ILLUSTRATIVE WORKING EXAMPLE

From an equipment concern to a defensible decision

Review the incident and asset history, check maintenance evidence and supplier arrangements, assign corrective action and verify the result. Update the relevant risk or continuity arrangements when the learning changes your assumptions.

Assess the value using your own measures: time to retrieve evidence, overdue actions, time to first review and recurrence.

CONSULTANCY AND IMPLEMENTATION

ISO support at the point of work

Practical support for organisations building a system, preparing for an audit or improving an established operation.

We work with your people to understand how work is performed and turn requirements into usable processes, proportionate controls and evidence. Delivery can combine onsite workshops and process reviews with remote document support and follow-up.

01

Understand your position

Review scope, business context and existing arrangements. Identify gaps, significant risks and priorities before committing resources.

02

Build a workable system

Develop process maps, responsibilities, objectives, registers and proportionate documentation around your operation.

03

Put controls into practice

Run onsite workshops, coach process owners and help teams implement agreed controls and retain supporting evidence.

04

Maintain and improve

Support management review, action follow-up and certification readiness. Agree a focused plan for ongoing support.

Typical engagement outputs

A prioritised gap review, an agreed implementation plan, named action owners, practical working documents and a clear view of remaining readiness issues.

Onsite locations, travel, technical scope and timescales are agreed in the proposal.

STANDARDS AND SPECIALIST SUPPORT

Support across your management systems

Start with the standards and business needs that apply to your organisation. Integrate shared processes where this makes the system easier to operate.

Standard	Focus	Example support
ISO 9001	Quality management	Process control, customer requirements, performance and corrective action.
ISO 14001	Environmental management	Aspects, obligations, operational controls, objectives and performance review.
ISO 45001	Occupational health and safety	Hazards, worker participation, risk controls and improvement priorities.
ISO 22301	Business continuity	Business impact analysis, disruption risk, recovery priorities and exercises.
ISO/IEC 27001	Information security	ISMS readiness, risk treatment, control evidence and the Statement of Applicability.
ISO/IEC 17025	Testing and calibration laboratories	Scope-led readiness and management-system support for accreditation preparation.
ISO/IEC 17024	Certification of persons	Readiness review and support for scheme governance, impartiality and controlled records.
AS9100	Aerospace quality	Discuss specialist quality-system and readiness support against your technical scope.

Auditing can draw on ISO 19011 guidance. Specialist work is agreed against competence and scope. The dedicated AS9100 digital hub is in development. Enquire about specialist consultancy separately.

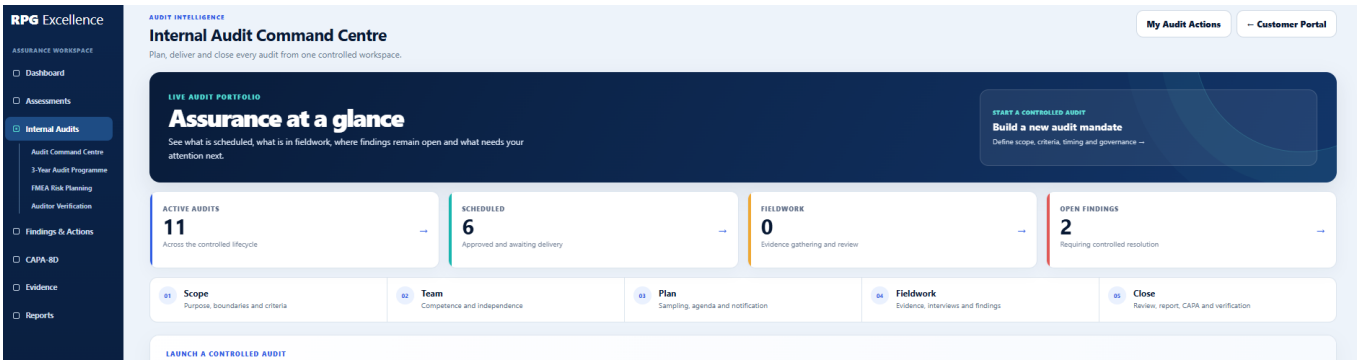

Discuss your applicable standards

INTERNAL AND SUPPLIER AUDITING

Audits with evidence and follow through

Test whether controls work in practice and give management a clear basis for deciding what needs attention.

We can plan and deliver internal, process and supplier audits, including integrated management-system audits. Scope, criteria, sampling and independence are agreed before fieldwork. Onsite interviews, observation and record review establish the evidence behind each conclusion.

Internal Audit Command Centre. Public product screenshot with illustrative values.

- Risk-based programme and audit plan, with clear scope and criteria.
- Findings linked to requirements and sampled evidence, with a practical report for management.
- Owned corrective actions and a separate effectiveness review before closure.

Supplier assurance

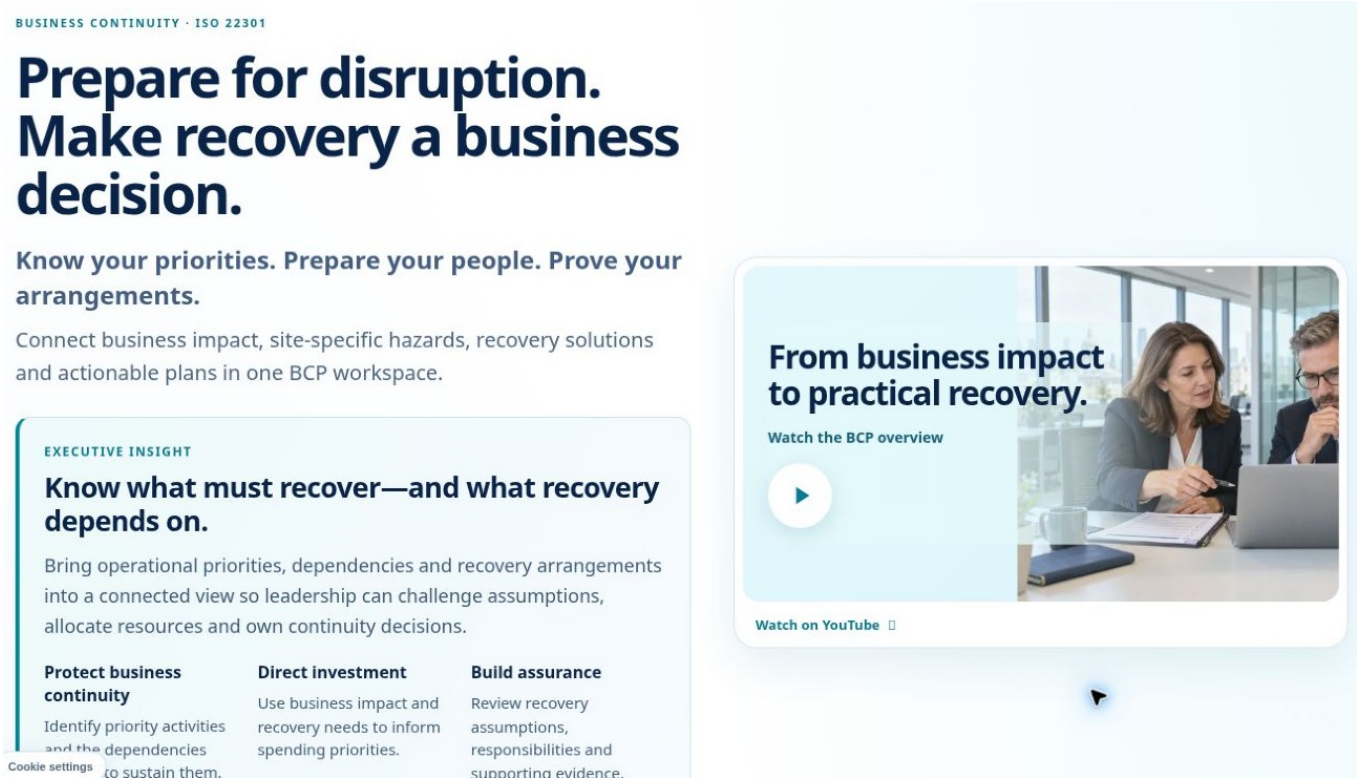

Focus the review on the capabilities, controls and evidence your organisation relies on. Agree supplier access, audit criteria and follow-up expectations before the visit.

RPG provides consultancy and audit support. Certification and accreditation decisions remain with the relevant independent bodies.

BUSINESS CONTINUITY PLANNING HUB

Know what must recover and how

Build continuity as an ongoing management process. The BCP Hub connects site context, roles, business impact, dependencies, disruption risk, recovery plans and exercises.

Public Business Continuity Hub view. The workflow supports ISO 22301 readiness and implementation.

01 **Business impact analysis.** Record critical activities, impacts over time, dependencies and agreed recovery objectives.

02 **Assess disruption.** Evaluate credible site scenarios, existing controls and vulnerable resources.

03 **Choose solutions.** Compare people, premises, technology and supplier options against recovery needs.

04 **Prepare the response.** Define activation, authority, communications, responsibilities and recovery arrangements.

05 **Exercise and improve.** Prepare teams, test assumptions, retain lessons and assign improvements.

ASSET MANAGEMENT AND SUPPLIER ASSURANCE

From the asset label to the evidence

Bring asset identity, accountability, maintenance and evidence together. A QR label gives authorised users a direct route from the equipment to its current controlled record.

Public RPG asset-management promotional artwork. The depicted dashboard is illustrative.

RPG EXCELLENCE
ASSET IDENTIFICATION - DEMO
DEMO-001

Extraction unit

OWNER
Facilities team

LOCATION
Workshop A

Identification only - not permission to use

Sign-in for current records

Identify. Review. Act.

Find the owner, location and operational status. Review current instructions, planned preventive maintenance (PPM), service evidence and approved suppliers. Link relevant permits or Management of Change records.

Illustrative label with demonstration data; the sample QR is not an operational asset link. Real asset records require authorised sign-in. Scanning a label does not confirm equipment is safe to use.

ACCIDENT INCIDENT AND NEAR MISS REPORTING

Turn a concern into controlled action

Make reporting accessible where work happens, then give the response clear ownership. Connect local context with review, investigation and improvement.

01

Scan the work area

Open the relevant zone page on a phone. A zone report can be submitted without sign-in.

02

Check available information

View published local assessments, controls, PPE and inspection information, according to the organisation's settings.

03

Report what happened

Capture the accident, incident, near miss, hazard or concern. Photos and contact details are optional.

04

Review and follow through

Authorised teams assess the concern, decide escalation and investigation, assign action and review the evidence of resolution.

Faster access to reporting. Better context for review.

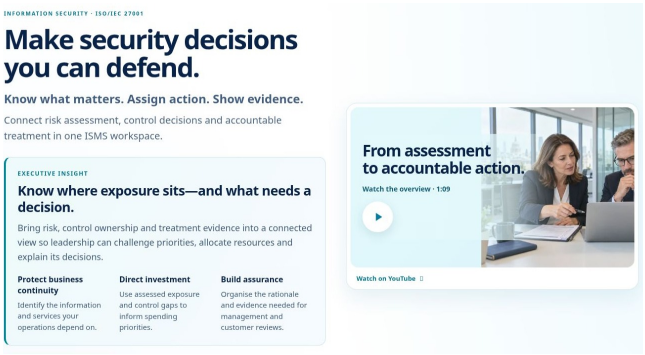

A practical route for employees and a traceable starting point for management. Public submission does not make internal company records publicly accessible.

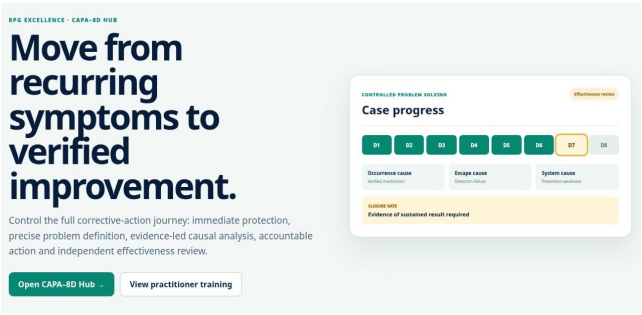

Public promotional artwork is illustrative. Operational posters use the generated zone QR code. For immediate danger, follow site emergency procedures; this form does not summon emergency assistance.

INFORMATION SECURITY AND CAPA 8D

Control exposure and verify improvement

Specialist hubs preserve the detail each discipline needs while keeping evidence, decisions and accountable improvement within the same assurance environment.

Information Security Hub

Assess ISO/IEC 27001 readiness and information-security risk. Record treatment and risk ownership, justify applicability in the SoA and retain control evidence for review.

CAPA-8D Hub

Guide investigations from containment and problem definition through tested causes, corrective action and independent effectiveness review. Keep implementation separate from the decision that an action worked.

Keep the decision trail connected

An incident may expose a control weakness. Review its evidence, record the risk decision, assign treatment and verify the outcome. Use the learning to strengthen the management system.

Public hub website views. Workflow illustrations are examples, not client results.

TRAINING PUBLICATIONS AND PRACTITIONER SUPPORT

Build the capability behind the system

Combine your team's ownership with the guidance and skills needed to operate the system. RPG supports implementation, day-to-day use and ongoing improvement.

01

Risk assessment

Initial and refresher learning to strengthen hazard recognition, risk evaluation and control decisions.

02

Internal auditing

Refresher learning on planning, interviewing, evidence, findings, reporting and follow-up.

03

RCA and corrective action

Practitioner learning on containment, problem definition, causal analysis, action strength and verification.

Advice and tools that work together

Use onsite consultancy and workshops to help translate requirements into working controls. Support the team with practitioner publications, editable resources and platform onboarding. Agree the support needed as responsibilities and priorities develop.

Platform subscriptions, training and consultancy are scoped separately unless combined in the proposal.

WORKING WITH RPG EXCELLENCE

Make RPG your home for assurance

Tell us the business outcome you need, the standards in scope and the date that matters. We will shape a proportionate proposal around the work.

01 **Explore the platform**
See the hubs relevant to your work and discuss access, onboarding and your first assurance workflow.

02 **Add onsite expertise**
Agree a defined package of ISO consultancy, implementation support or audit delivery around your business priorities.

03 **Build ongoing assurance**
Combine internal ownership with planned reviews, training, audit support and action follow-up as required.

Agree the work before it starts

Your proposal will define the scope, sites, deliverables, timetable, responsibilities and fees. We agree how progress and outcomes will be reviewed, including any follow-up needed after delivery.

Discuss your requirements
